

SWE IN EUROPE

Did you know that the Society of Women Engineers has three members in continental Europe? Dr. Anna E. Amour is Chief of Statistics Office for Societa Idoelettrica Piemonte, an electric power plant in Torino, Italy. Dr. Amour joined our society while earning a Master's degree in industrial engineering at New York University in 1952-53.

Anneli Ahola, a graduate chemical engineer from Helsinki, Finland, spent the school year of 1953-54 on a research project at the University of Washington, studying under an AAUW scholarship. She was very enthusiastic about joining SWE. Miss Ahola returned to her native country last July with plans for setting up a chapter of the Society in Helsinki, where she knows of about twenty women chemical engineers.
